A piece of our mind

LISTEN ALONG

The team compiled this Spotify playlist to accompany the issue. Just scan the code with your smartphone camera to hear what we selected.

Features

30

How to mend your pandemic brain

Life under covid has messed with our brains. Luckily, they were designed to bounce back.

By Dana Smith

34

The miracle molecule

Drugs based on the molecule boost memory formation and could help treat everything from Alzheimer's to brain injuries. By Adam Piore

40

The consciousness meter

A neuroscientist has found a way to measure hidden signs of consciousness in unreachable patients. By Russ Juskalian

46

Change of mind

Our brain cells acquire mutations as we develop and age—and scientists want to know if this affects our mental health. By Roxanne Khamisi

54

Malformed

Get up close with the world's largest collection of preserved abnormal human brains.

Images by Adam Voorhes and Robin Finlay

62

Adventures in lucid dreaming

Some lucky people can control their dreams. It could teach us more about how the brain works.

By Neel Patel

66

A mind of its own

If we build machines that can think and feel, what will they be like—and how will we know?

By Will Douglas Heaven

Report

14

When I see your face

The moment we recognize someone we love, a lot happens all at once. By Tate Ryan-Mosley

17

From memories to brains grown in the lab

Neuroscientists are unwrapping the mysteries of the human brain. By Hannah Thomas

23

Is your brain a computer?

We asked experts for their best arguments in this long-standing debate. By Dan Falk

26

Making memories

How technology helps us understand and even manipulate memories. By Joshua Sariñana

28

The brain, misunderstood

Five big mistakes about the brain.

Text by David Robson, comics by David Biskup

Reviews

73

"I understand what joy is now"

MDMA-assisted therapy has had amazing results. One participant tells his story. By Charlotte Jee

76

Believing is seeing

Three books probe the relationship between what we perceive and who we are. By Matthew Hutson

79

The failed promises of the brain map projects

The expensive efforts to map the brain have largely fallen short. By Emily Mullin

82

The magic number

Could plants, bacteria, and our body's cells have their own sort of consciousness? By Christof Koch
